

SENSOIRIS GAS

Facility type: Residential

SensoIRIS GAS is addressable gas, LPG and CH4 (Methane), leakage detector. When flammable gas is present in concentrations, higher than the dangerous, threshold alarm level is activated. Red indicator lights on and buzzer is turned on. Gas detector has auto diagnostic function. It continuously checks sensor and

electronics status. If problem with sensor or electronics yellow LED is activated, green LED blinks and sound signal is activated.

The SensoIRIS GAS detector must be connected only to fire panels, which support TTE communication protocol!

DETECTION ARCHITECTURE:	Addressable
SYSTEM ELEMENT:	Periphery
PRODUCT TYPE:	Special applications
TECHNOLOGY TYPE:	Wired

CATEGORY: Fire Alarm Systems

DESCRIPTION

SensoIRIS GAS features a button with the following functions:

- If short pressed “SILENCING” mode is activated. Green LED flashes, buzzer and panel activation are disabled for 5min;
- If pressed for more than 5 seconds “TEST” mode is activated. In this case green, red and yellow LED’s are activated. Panel and buzzer are activated, too. After 6 seconds gas detector emits 2 short sounds and leaves “TEST” mode.
